Definition of factor B precursor [validated] - human

Complement factor B precursor [validated] - human

N.Alternate names: C3 convertase; C3 proactivator; glycine-rich beta-glycoprotein; he

N.Alternate names: C3 convertase; C3 proactivator; glycine-rich beta-glycoprotein; he

N.Alternative-complement-pathway C3/C5 convertase (EC 3.4.21.47) Bb fragmen

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /SIDSI/gcgdata/hold-geneseq/geneseqp-embl/AA1980.DAT:*

AMD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE0145-AAE01513 represent the proteins they encode. CC AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the emount of the new protein in a sample or by determining the presence of mountations in the new genes. Specific uses are described for each of the untations in the new genes. Specific uses are described for each of the proliferative disorders; cancer, tumours foctal and developmental proliferative disorders, diseases of the immune system, allory autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allory autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allory autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allory accorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, schizophrenia, asthma, contintestinal disorders, pregnancy-related disorders, endocrine cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders, continter of primary tissues, to repenerate tissues, to identify their culture of primary tissues, to repenerate tissues, to identify their culture of primary tissues, to repenerate tissues, to identify their conture of primary tissues, to repenerate tissues, to identify their conture of primary tissues, to repenerate tissues, to identify their conture of primary tissues, to repenerate tissues, to identify and alloring partners, and in chemotaxis, and includes specific for a protein of the invention can be used in alleviating symptoms associated with the disorders many or number of immunosorbent assay (ELISA). The present sequence represents a human contribution 
                                                                                                                                                                                                                                       New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TRGTTLMKLTEDREQIRQCLEELOKVLPGGDTYMHEGFERASEQIYYENRQGYRTASVII 120
